MRI – BRAIN (PLAIN STUDY)

Technique

3 plane localizer.

Axial T2W/ Axial T2 FLAIR. DWI / GRE. Coronal T2W/ SAG T1W.

Findings:

Areas of diffusion restriction with FLAIR hyperintensity seen involving both parafalcine frontal lobe and anterior aspect of body of corpus callosum.

Bilateral basal ganglia appear normal.

Both the thalami appear normal. Ventricles and cisterns appear normal.

The corpus callosum, anterior and posterior commissures appear normal.

Pituitary gland and sella turcica are normal.

The cavernous sinuses and the internal carotid arteries are normal.

The midbrain, pons and medulla appear normal.

The superior, middle and inferior cerebellar peduncles are normal. The cerebellar vermis and the cerebellar hemispheric parenchyma reveal no significant abnormality.

The internal auditory canals and their contents are normal.

No abnormal extraaxial fluid collection.

The calvarium is normal. The orbits and their contents are normal.

IMPRESSION:

- ACUTE NON-HAEMORRHAGIC INFARCTS INVOLVING BOTH PARAFALCINE FRONTAL LOBE AND ANTERIOR ASPECT OF BODY OF CORPUS CALLOSUM.
- NO INTRAPARENCHYMAL HEMORRHAGE OR FOCAL MASS LESION.
